

Hot Cider Pot Instructions

Please Note: These machines require quite a bit of power. For best results, be certain to use appropriately rated, not overloaded, outlets. Avoid operating more than a single Cider Pot on a circuit.

1. Fill the urn with **cold** cider to the fill line on the inside of the urn.
2. Add mulling spices.
3. Plug the power cord into an outlet, turn power switch to “On” if the model used incorporates one. Allow approximately one minute of heating time per cup of capacity.
4. When the red light at the bottom of the machine comes on the cider is ready.
5. Turn off and unplug the machine when not in use.

If you experience any difficulty with the rental equipment please call: 360-754-7368. Thank you for including Celebrations in your event.
